

Introducing 7 kg Honeycomb Care

Washing Machines
Tumble Dryers

2009

New 7kg Honeycomb Laundry Range from the Masters of Gentle Laundry Care

With over a hundred years of experience at the forefront of innovation in gentle fabric and garment care, Miele are proud to introduce a new and exciting range of 7kg honeycomb washing machines and tumble dryers.

The W5000 and T 8000 models incorporate innovative new features taking into account both user convenience and ecology whilst giving your valuable garments the gentlest treatment ever.

Washing machines 7kg Patented Honeycomb Drum

All W 5000 washing machines feature our patented honeycomb drum with a 7 kg load capacity which makes it ideal for households with large amounts of laundry. Even with a full load, the laundry has ample space to tumble freely, resulting in fast wetting and an even distribution of detergent. The unique honeycomb structure creates a thin film of water which gently cushions the laundry away from the drum.

A Miele wash in a honeycomb drum can be even gentler than hand washing. In fact, during quality tests at Miele, red roses were washed inside the machines honeycomb drum during a cold silks wash, only to emerge every bit as beautiful and entirely intact! No wear or tear, shrinking or snagging.

Low energy consumption

Saving energy helps to minimise the burden on the environment and means lower electricity bills. Furthermore, our W 5000 models feature a unique A energy rating for half loads, which equates to the standard household load – a result no other washing machine on the market is able to achieve!

Express 20

The specific wash profile of this programme lasts for only 20 minutes at up to 40°C - perfect for those special occasions when you need your shirt in a hurry.

Intensive Plus

This programme on the entry level W 5000 models is ideal for heavily soiled laundry. Thanks to its automatic pre-wash and extended wash time, it is tough on persistent stains.

Low temperature washing

Everyday laundry is often only lightly soiled and does not need high temperatures to get it clean. The W 5000 series offers economical washing at just 20°C. This in turn results in 67% less energy than washing at 40°C.

Stains

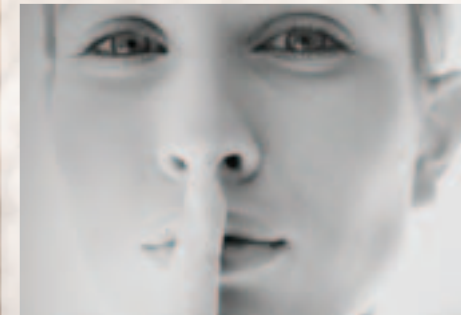

Top of the range models incorporate this unique extra option. The consumer benefits from intuitive, convenient operation and highly effective removal of difficult stains. A unique list of 22 different stain types, from which 3 different stain types can be chosen in one programme.

Self-cleaning detergent dispenser

The days of manual cleaning are over. All W 5000 models have a detergent dispenser drawer with a detergent repellent surface and automatic impulse rinsing during every programme to ensure it never clogs and is always spotlessly clean.

Extra quiet

This feature is ideal when washing during late hours or other quiet periods. Just select final spin when convenient and the laundry will be ready to unload within 2 minutes.

Tumble dryers

7kg Patented Honeycomb Drum

T 8000 tumble dryers feature modified electronics as well as an increased condensate drawer capacity. Our patented honeycomb drum incorporates drum ribs which have been further improved following the Miele promise of delivering the gentlest possible garment care. This unique drum is designed with softly contoured curves ensuring that the laundry glides gently over them.

Perfect Dry

This unique feature on all T8000 7kg dryers ensures that your laundry is always perfectly dry – neither damp nor over dried. It is achieved because only Miele measures both the residual moisture and the conductivity level of the water, which varies from area to area and even after longer rainy spells, resulting in the automatic adjustment of the drying time. The Perfect Dry LED will let you know when this feature is operating and signals that your laundry is getting the very best treatment.

Express drying

In line with the new Express 20 programme on W 5000 washing machines the new 7kg T8000 tumble dryers incorporate an Express programme with a special reversing rhythm and a maximum heat output. This ensures a fast and efficient laundry turnaround.

Gentle smoothing

All T 8000 7kg tumble dryers feature this moisture controlled programme. Thanks to a special reversing rhythm and anti-crease phase, the need for ironing is reduced by up to 30%. Even dry laundry is recognized which automatically activates a warm airing phase resulting in a virtually wrinkle free finish.
